Problem Statements

Template:

As a worker:

As an industrialist:

Problem Statement (PS)	I am	I'm trying to	But	Because	Which makes me feel
To predict the problem in yielding of crops	A worker	Make the yield protection better	It require more technology	Anytime the climate might change so we require sensor to monitor	There is no wastage of crops
To reduce the work load of farmers and also it reduce the cost	An industrialist	Secure the crops yeild	It need more effort and equipments to maintain the crops	Live sensing of temperature and humidity around the field	the overall protection of crops yield might be increased
